

AG retools to offer protective gear

TORONTO, ONTARIO (April 10, 2020) – “Like all Canadians, we wanted to use our skills to help people who continue to work in these challenging times,” says Rino Dambrosio, Executive Vice President, Astley Gilbert.

“We looked at our manufacturing capabilities and quickly retooled to produce polycarbonate face shields,” continues Rino. “They offer protection for frontline staff in seniors’ homes, or those in a retail or commercial setting. And since they’re hardhat-friendly, construction and utility workers can benefit.”

Manufactured and distributed from AG’s GTA facility, the production of all products adhere to Health Canada’s safety protocols. “From sanitized work stations, to physical distancing and the safety of our employees and products are top of mind,” adds Rino.

The shields are made of durable polycarbonate – they are lightweight and transparent. One size fits all, with an adjustable band for a comfortable fit. Alcohol-based cleaning products offer best results for cleaning.

AG also offers a suite of products, such as plexiglass partitions, floor decals and signage to assist in physical distancing in a commercial setting.

About Astley Gilbert: Celebrating 50 years in business, AG offers print and online solutions through 12 Ontario locations. From grand format, to direct marketing, to visual displays, vehicle wraps and photo books, AG delivers. Learn more at astleygilbert.com.
